PROCESSES INVOLVED

METHOD

THIS IS WHAT YOU CAN DO WITH US

think about yourself!

We are the first to perform and **certify** the **testing procedure** linked on the one hand to the **production via 3D printing of surgical models and templates** and on the other hand to the production of **complete arches obtained by zirconia milling and selective laser melting**.

All of these processes are subjected, for their intrinsic nature, to a stabilisation/sintering production cycle that can alter them in terms of size. That is why we at New Ancorvis wanted to introduce this additional testing step to ensure that **the file received during the order phase perfectly matches the structure produced**.

How?

By **overlapping the source file with the scan of the device produced** using validated and dedicated software.
